Introduction

Background

This document is part of the Analysis and Design (A&D) Phase for the Matador Lite Project which will define the scope of the project. Requirements are gathered from the sponsor and from the development team and documented as requirements. It should be noted that no matter how hard all stakeholders try, the requirements can not be fully defined at the beginning of the project. Some requirements will change, either because they simply weren't extracted, or because internal or external forces impact the project during development. Thus, one of the key success factors in the project will be flexibility in thinking and operation.

The deliverable from the analysis stage is a series of specification documents that have been approved by all members of the team. These documents anchor the project team to the original vision and permits a managed discussion of scope change.

Purpose

This document is the functional specification for the Matador Lite Project. It is organised by functional component. The main purpose of this document is to ensure that function design of the system is defined in a way that can be validated by the business owners and that these requirements are communicated effectively to the software designers.

The Functional Requirement Specification (FRS) covers the behaviour of the system and how end-users (both people and other systems) will interact with it.

The purpose of this document is to allow Yum to signoff on the functionality of the system before the developers begin work on implementing the data model and coding the business layer of the system. This allows technical design decisions to be made upfront taking into account the whole module rather than an individual function. It also allows common areas to be identified upfront to cut time in initial development and rework in the future.

Overview

This document includes the following sections:

- Section 1: Business Framework - this section documents Axe's understanding of the business processes that are salient for this functional specification
- Section 2: Screens – provides the functional specifications for UI components
- Section 3: Non-Functional Requirements

© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

Scope

The scope of this project is constrained by those functional and technical components that can be built on top of the existing pricing database and the existing interface to the AS400 gateway used by the current web site. This includes the following features:

- Retirement of flash site, replaced with JBoss Seam/ICEfaces interface
- One-page ordering
- Integration of ordering into pizzahut.com (/order)
- Standard Pizza products
- Pasta products
- More 4 All Pizzas
- Preview of product ingredients on mouse rollover
- Addition or removal of toppings, where permitted
- Assisted-entry of postcode/suburb and street
- Credit card or cash payment
- Pickup or delivery
- Minimum order value
- Delivery surcharge
- IP capture message for cash purchases
- Order confirmation
- Order success message
- Marketing opt-in and email capture for EDM
- Delayed ordering (same day only)
- Order process over SSL
- Email receipts
- Admin interface for updating product images

Out of scope

- Offers – coupons & vouchers
- Meal bundles
- Store-based pricing
- Ordering of half and half pizzas
- Favourites
- Any new product line apart from those explicitly listed as in-scope above
- Modification of the existing data model
- Customer registration for the site
- Order History
- Manage registered customers
- Store Locator w Google Maps

© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

- Default delivery address
- Default pickup store
- Recent delivery addresses
- Changes to the AS400 interface
- Extendable Portal platform
- Implementation of Enterprise Service Bus
- Disaster Recovery site
- Documentation not explicitly stated as a deliverable
- End-user training
- Knowledge transfer or handover of the project details or technical solution to Yum or other delegated parties
- Replacement of the Store POS system
- Configuration of Yum or SafeCom hardware, software and networks unless explicitly stated

Glossary

Term	Description
Brand Site	The main Pizza Hut website (http://www.pizzahut.com.au), currently used for all public-facing web information other than online ordering
More 4 All	A pizza with different toppings on each of the four quarters. For this release, customers will not be able to personalise More 4 All pizzas. That is, there will be 3 different More 4 All pizzas, each completely pre-configured that can be added to the till as a single product.
Pizza Mia	A smaller-sized pizza, at a lower price point, currently for sale in other parts of the world.
PHD	Pizza Hut Direct, the online ordering website for Pizza Hut Australia (http://www.pizzahutdirect.com.au)
Yum	The holding company for Pizza Hut Australia; the owners of this project.

Assumptions

- All product types (i.e. pizza & pasta) conform to the same data model (product type, product, size, variety, toppings) and that this data model is the same as the existing PHD database schema.
- No offers (coupons or meal deals) will be available through the website.
- Delayed ordering will be possible, but restricted to scheduling orders for later the same day
- There will be no customer registration facility on the site, and therefore, no saving of preferred pickup store or delivery addresses.

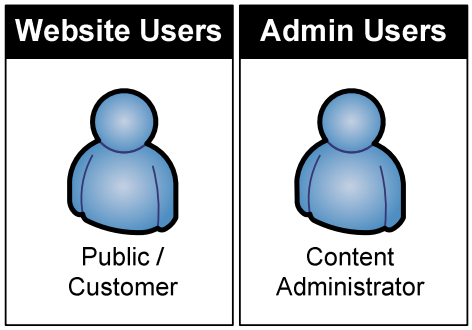
© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

- There will be no validation of Credit Card numbers by the system. All payment processing will be handled offline as per the current business process.

© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

System Users

The following types of users will exist in Stage 1A of this project:



Website Users

Public/Anonymous Customer

Public/Anonymous customers will be able to view the static pages of the Pizza Hut website, view the menu and offers, find their nearest store and place an order.

Note: there will be no provision for registered customers delivered as part of Matador Lite.

Admin Users

System Administrator

System administrator users will be able to login to an alternate area of the website to:

- Update product images
- Update custom properties (i.e. default menu tab, chicken surcharge)
- Remove email addresses

Please note that the Admin functionality will be delivered for a second release after the initial go-live.

1-Page Ordering Screen

Overview

The following section breaks down the functional requirements for the site by screen regions:

- 1-page Ordering Screen (aka Order Page)
- Order Confirmation Dialog(s)
- Error dialogs and receipts

All other pages on the pizzahut.com.au site remain unchanged from their current configuration.

1-page Ordering Screen Layout

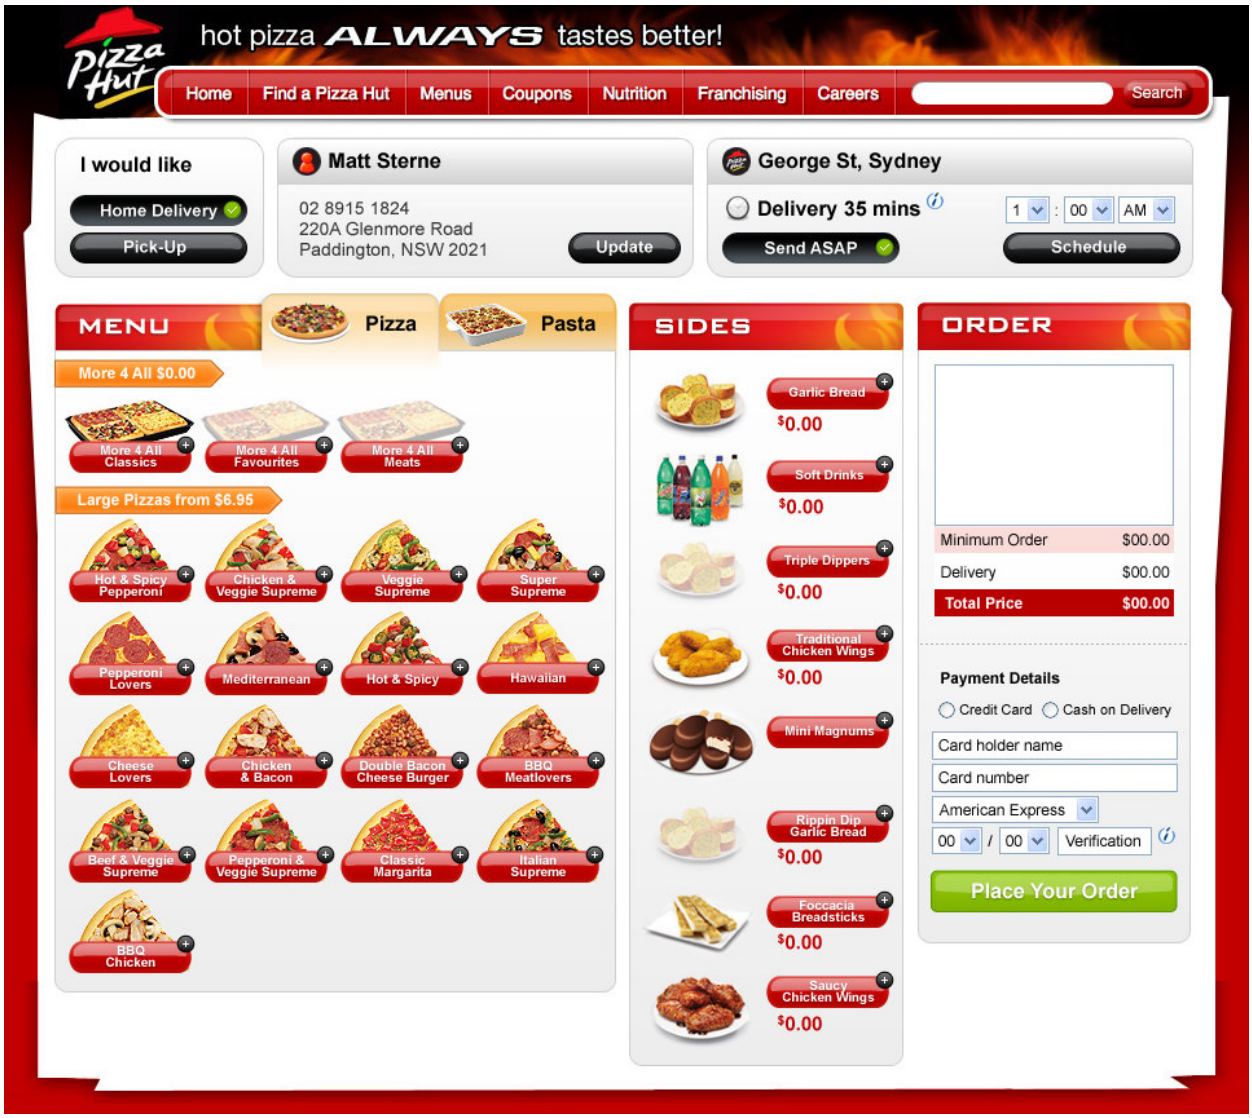

Figure 2. Order page layout

Commercial-in-confidence

This screen can be broken down into the regions listed below. These are detailed further in the following sections.

- ORD01A Header region
- ORD01B Footer region
- ORD02 Store Assignment region
- ORD03 Menu Selectors region
  - ORD03A Pizza Selector
  - ORD03B Pasta Selector
- ORD04 Sides Selector
- ORD04A Soft Drink Selector
- ORD05A Pizza Personalisation region
- ORD05B More 4 All and Pasta Personalisation region
- ORD06 Current Order region (aka the Till)
  - ORD06A Shopping Basket
  - ORD06B Credit Card Payment
  - ORD06C Cash on Delivery Payment
- ORDCONF01 Order Confirmation dialog
- ORDCONF02 Order Processing dialog
- ORDCONF03 Order Confirmation dialog
- ERR01 Store Closed dialog
- ERR02 Other Errors dialog

ORD02: Store Assignment region

Overview

The Store Assignment region is used to capture customer details that are required for the ordering process – including occasion (pickup or delivery), name, phone number, location and email address. The ordering region is only enabled on the condition of the successful assignment by this region of a store to the order.

Region States

1. HD — Home Delivery
2. HDA — Home Delivery – Store Assigned
3. PU — Pickup
4. PUA — Pickup – Store Assigned

Commercial-in-confidence

ORD03: Menu Selectors region

Overview

The menu region contains multiple tabs, one for each type of meal available:

- ORD03A: Pizza Selector
- ORD03B: Pasta Selector

When this system initially goes live (scheduled to be 27th January 2009) the default tab should be Pasta.

Additional functionality will be built in so that if a special request parameter is passed in as part of the URL when accessing the 1-page ordering screen, it will show pizza or pasta. This will allow the default tab to be overridden (i.e. in the case of external marketing campaigns).

Screen Layout

Figure 8. Menu region (showing sample pizza menu)

© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

ORD03A: Pizza Selector

Overview

The pizza selector is used by the customer to choose a base-variety combination for a pizza. The pizza menu is split into ranges. For the next 6 months, the ranges are "More 4 All" and "Pizza". As range is not a value in the current data model, this will be determined by the underlying product codes.

"More 4 All" is the first range shown at all times.

Each "flavour" of More 4 All Pizza has a pre-set combination of 4 varieties, so no selection of varieties is required. The selector will simply show each of the available combinations.

Toppings on a More 4 All Pizzas are not personalisable, neither is the base or sauce. The personalise region for a More 4 All will be identical to the Pasta personalise window.

Please refer to A.1 Available menu items on 27th January 2009, Pizza Menu for the list of Pizzas that will be available when the system initially goes live.

Should a pizza variety not be available for the selected store, it will not be shown.

Screen Layout

Figure 9. Pizza Selector

© Copyright Axe Group Pty Ltd (ABN 62 095 107 814)
Commercial-in-confidence

Input Fields

#	Name	Type	Validation	Comments
1	More 4 All range	Static text	None	Shows the value specified by marketing for the More 4 All range, **not** the lowest value returned by the AS400 gateway. This value is held in a custom parameters database table and can be changed in the database without a new code release.
2	Pizza range	Static text	None	Shows the value specified by marketing for the Pizza range, **not** the lowest value returned by the AS400 gateway. This value is held in a custom parameters database table and can be changed in the database without a new code release.

Commercial-in-confidence

ORD03B: Pasta Selector

Overview

The pasta selector allows the customer to choose a pasta-variety combination to add to their order.

Please refer to A.1 Available menu items on 27th January 2009, Pasta Menu for the list of Pastas that will be available when the system initially goes live.

Screen Layout

ORD04: Sides Selector

Overview

The Sides selector is a simple product selector region, which allows customers to add side dishes, drinks and desserts to their order.

Please refer to A.1 Available menu items on 27th January 2009, Sides Menu for the list of Sides that will be available when the system initially goes live.

ORD05A: Pizza Personalisation region

Overview

This dialog appears when the customer selects a pizza within the standard pizza range OR they choose to personalise a pizza they have already added to the Till.

This region replaces the pizza menu whilst open. From this menu, customers can choose their pizza base, change their sauce and change their toppings.

If a base type is currently not available for the selected store, it will not be shown on this screen.

Navigation through this region is in 2 steps:

1. The customer must first select a base to show the toppings selection and "Add to Order" button
2. The customer can then add/remove toppings from their pizza

Please note that there is no base selected by default.

Initially the Current Toppings list will be populated with the standard toppings for the variety.

Input Fields

#	Name	Type	Validation	Comments
1	Pizza Variety	Image	None	Standard image of variety – same as on variety selector
2	Quantity	Select box	None	Options are: 1 to 10 1 is selected by default An increase in quantity updates the price.
3	Base	Clickable images	None	Image UI changes on selection (shows tick). If no base is selected: Enables the toppings selection and "Add to Order" button. Updates the price based on the base + variety combination. If a base is already selected: Updates the price based on the base + variety + topping changes combination.
4	Sauce	Select box	None	UI to be revised to allow for no sauce or double-sauce options
5	Current toppings	List with remove buttons (X)	None	Number to the left of the topping indicates whether that topping has been "doubled" (2x). Clicking a remove button clears the topping (or removes a double). If the item being removed is an additional topping, then the price will be updated.
6	Additional toppings	List with add button (+)		Once a topping is "doubled" in the Current toppings list, it disappears from this list. Clicking an add button adds that topping to the current toppings list and updates the price.
7	Price	Text	None	Updated on addition or removal of additional toppings, as well as changes in quantity

ORD05B: More 4 All and Pasta Personalisation region

Overview

This dialog appears when the customer:

- Selects a pasta from the pasta menu
- Selects a pizza within the More 4 All range from the pizza menu

This region replaces the pasta menu whilst open. From this menu, customers can choose the quantity of Pasta or More 4 All items they require.

Screen Layout – More 4 All & Pasta

ORD06A: Shopping Basket

Overview

The Shopping Basket display shows the current items that a customer has selected for purchase.

There are four kinds of order items that can be displayed in the Till's Order Details region

- Main item – Pizza (Pizza range)
- Main item – Pizza (More 4 All range)
- Main item – Pasta
- Sides – including drinks

When displayed in the list, all items behave the same except for the Pizza range. Please see the Navigation section below for more details.

Item – Pizza (pizza range)

Products are displayed in much the same way as Sides, with the exception that the base variety combination is shown

That is, normally, major products are displayed as follows:

(X) [*Quantity* x] [*Size*] <*Base*> <*Variety*>	$ Price

E.g.

(X) 1x Large Pan Hawaiian	$ 7.95

However, if additional toppings have been added to the item, show the following:

(X) [*Quantity* x] [*Size*] <*Base*> <*Variety*>	$ Price

E.g.

(X) 1x Custom Large Pan Hawaiian	$ 9.90

Likewise, if any standard toppings have been removed from the item, the same should apply.

Item – More 4 All Pizzas, Pasta and Sides

More 4 All pizzas and Pasta items are displayed in the same way:

(X) [*Quantity* x] <*Product*>	$ Price

E.g.

(X) 1x Meatball Napolitana & 5 Focaccia breadsticks	$ 14.95
(X) 1x More 4 All 4 Classics	$ 13.95
(X) 2x Pepsi 1.25L Bottle	$ 3.90

1E	Order Details – Sides item	Button	None	On click of the (X) button: Deletes the item from the order and updates the Total Price. If there are multiple of the same item, deletes a single item.
2	Delivery charge	Text	None	The delivery charge is held in a custom parameters database table and can be changed in the database without a new code release.
3	Total Price	Text	None	Sum of items plus delivery charge
4	Minimum Order	Static text	None	Only visible for home delivery orders. No min for pickup. Minimum order value includes all charges (i.e. delivery charges and any holiday surcharge) The minimum order value is held in a custom parameters database table and can be changed in the database without a new code release. Note: Minimum value will initially be set to $15
5	Payment Details	Radio buttons	None	Only visible for home delivery. Cash only allowed for pickup. Options are: Credit Card, Cash on Delivery By default, no item is selected On selection: Changes the entry fields below between credit card details and showing the customer their IP address

Please note that whilst Minimum Order is shown above the delivery price in the screen above, final creative direction from Profero is to include it under the Total Price.

Commercial-in-confidence

Non-Functional Requirements

URL

The Online Ordering (PHD) website will be access via the Brand site, accessible via the URL: https://www.pizzahut.com.au/order

The existing http://www.pizzahutdirect.com.au URL will be redirected to the https://www.pizzahut.com.au/order address. Post go-live, the website statistics gathered by Google Analytics should identify to Yum whether the majority of users continue to access the site via the brand or PHD URL.

It will be Yum's responsibility to manage the delegation and redirection of these domains.

Operating system and browser compatibility

The site must be useable across the majority of current operating systems and browsers, including, but not limited to, PCs, Macintoshs and iPhones.

Due to the limited time available to develop the system, the system will be developed to look and operate correctly on following operating system and browser combinations:

- Windows XP and Internet Explorer 6.0
- Windows XP and FireFox 2.0

These combinations make up for 90.51% of the traffic to the PHD site and 91.05% of traffic to the brand site (based on Aug 08 through Oct 08 statistics).

Other combinations can be tested and any issues resolved post the initial go-live of this project. Based on current analytics data, we would recommend testing a Mac/Safari combination next (4.28% of current PHD traffic, 3.84% of current brand site traffic).

Performance

Website browsing

Based on current analytics data (running since late August 2008), the busiest day for page views was on Friday August 29, 2008, with a total of 84,745 unique page views. ~73% of this traffic was around 5pm-9pm, with the busiest hour being 6pm (23,050 page views).

The system must perform at an acceptable level whereby no page submission takes longer than 2 seconds to return a response to the user – excluding submissions involving a response from the back end system (AS400).

Assuming 23,050 page views per hour, the system must cope with 7 page views per second.

Ordering

Based on current analytics data, the busiest day for online ordering was on Friday September 5, 2008, with a total of 7,122 views of the confirmation page. The majority of this traffic was around 5pm-9pm, with the busiest hour being 6pm.

The system must perform at an acceptable level whereby it can handle simultaneous orders to the back end system (AS400).

Assuming that of the 10,167 confirmation page views during the busiest hour, 37% of the total orders were placed (2,635 orders), the system must cope with 44 orders per minute.
